

Dear partners and home owners,

Thankyou for your interest in an AGS Systems product, by THEINVISIBLETOOLBOX.
In the following pages, you will find a compilation of all technical matters of relevance from the manufacturers of the Frame system.

Content:

- TUS59 - Extrusion - A dimensioned Section view _____ Page 2
- TUS59 - Technical Specifications _____ Page 3
- TUS59 - Installation instructions _____ Page 9
- TUS59 - Generic application details by AGS _____ Page 25

AGS solutions are of the highest technical credibility, and manufactured to excellent quality control standards.

The products are designed for easy installation, and a durable, beautiful result.

Installation details pertaining to any particular project may vary.

We encourage you to get in touch with us with any technical question: THEINVISIBLETOOLBOX will be happy to take your wall assembly specific requirements, and offer you a suitable CAD detail for an architectural application, where the relevant profile is detailed into your construction.

THEINVISIBLETOOLBOX, delivers technical support and sales services for the AGS product line in Canada. We are happy to be of service, to include sales support, guidance to tradesmen as well as take on complete door projects.

We look forward to hearing from you,
and taking part in your future opening challenges!
Best, THEINVISIBLETOOLBOX team.

Profile detail

Model TUS59

Suitable for solid and dry construction

Description	Item number	Standard lengths*
TUS59	10459-11	1100 mm
TUS59	10459-22	2200 mm
TUS59	10459-27	2750 mm
TUS59	10459-33	3300 mm
TUS59	10459-55	5500 mm

*Special lengths on request.

Suitable for solid and dry construction

For maximum flexibility, 30 min tested by Chiltern Fire. The frame profiles are supplied either mitre-cut to size, or loose for cutting and assembly on-site. They are assembled using locking mitre corner inserts, temporary corner braces and bottom spreader bar. Then the frame is inserted to one side of the opening, attached using moveable brackets. The snap-in mesh ensures no plaster cracks between wall and frame. The door is hung from concealed adjustable hinges set into full-length hardwood sections inserted on all 3 sides of the frame. Suits standard or floor-to-ceiling doors.

Here you can find the assembling video:

TUS/TUT

Bei den Modellreihen TUS/TUT handelt es sich um Aluminiumprofile zur Fertigung von FRAMELESS Türen für den Massiv- und Trockenbau. In die Aluminiumprofile TUS wird je nach der Wahl des Türblattes ein dazu passender Holzkern eingearbeitet, in welchem die Ausfräsungen für die Schließbleche, Bänder und Dichtungen vorzunehmen sind. Je nach Türblatt kann die entsprechende Zarge in einer Stärke von 44/45/50/56 und 59 mm verbaut werden.

Die Aluminiumprofile stehen als Stangenware in den Längen 1100 mm, 2200 mm und 2750 mm zur Verfügung und sind kurzfristig lieferbar. Diese sind mit einer Schutzfolie versehen und werden im Set verpackt inkl. aller Montage- und Befestigungsteile angeliefert. Je nach Türblattstärke sind die Profile in verschiedenen Breiten erhältlich.

Die Türprofile bestehen aus einer rohen unbehandelten Aluminiumlegierung. Zement und seine Derivate produzieren, bei Nässe, alkalische Substanzen welche, wenn man diese auf der Oberfläche der Aluminiumlegierung arbeiten lässt, zu Korrosion führen kann. Deshalb wird empfohlen die Profile immer frei von Zement, Kleber und Fugenmaterial zu halten. Die Korrosion wird durch die empfohlene bauseitige Grundierung und Lackierung des Profils in Wandfarbe verhindert.

I modelli TUS/TUT sono profili d'alluminio per porte a filo muro del tipo FRAMELESS per strutture massicce e a secco. Nei profili modello TUS/TUT viene inserito un'apposito inserto di legno nel quale devono essere fresati i fori per le cerniere, lo scontro e la guarnizione. Secondo il modello scelto sono possibili ante da 44/45/50/56 e 59 mm.

I profili d'alluminio sono muniti di una pellicola di protezione e disponibili a magazzino nelle seguenti lunghezze: 1100 mm, 2200 mm e 2750 mm. I profili possono essere confezionati come kit inclusi tutti gli accessori per un semplice e rapido montaggio.

I nostri profili porta consistono d'alluminio grezzo, non lavorato. L'alta umidità del cemento e dei suoi derivati producono sostanze alcaline che possono causare corrosioni. Per evitare questo consigliamo di tenere i profili sempre liberi di cemento, colle e altre sostanze corrosive. La corrosione può essere evitata anche verniciando i profili con delle apposite lacche. Tuttavia l'alluminio non è resistente a tutte le composte chimiche.

The aluminium profiles TUS/TUT are used to create FRAMELESS doors for solid and dry constructions. A timber insert with a size of 45, 50, 56 or 59 mm must be added to the TUS aluminium profile in order to be able to prepare the millings for hidden hinges, striking panels and other hardware.

The TUS/TUT profiles are available as standard lengths of 1100 mm, 2200 mm and 2750 mm on stock ready to be shipped in a short time. All profiles are covered by a protective film and packed/delivered in a kit including the mounting- and fixing accessories.

The door profiles are made out of raw untreated aluminium. Cement and his derivatives produce alkaline substances when getting wet, which can provoke corrosion if they have time to work on the surface of the aluminium alloy. We recommend to keep the profiles clear from cement, glue and joints material. The above mentioned corrosion will be prevented by the recommended priming and finishing of the profiles in wall colours.

La gamme de modèles TUS/TUT sont constituées de profils en aluminium pour la fabrication de portes FRAMELESS (sans cadre) à utiliser en construction massive et sèche. Selon le vantail choisi, un noyau de bois correspondant est inséré dans les profils d'aluminium TUS/TUT. Les perçages pour les nappes de penne, les charnières et les joints doivent y être réalisés. Selon le vantail, le dormant correspondant peut être choisi dans une épaisseur de 44/45/50/56 et 59 mm.

Les profils en aluminium sont livrés sous forme de barres et sont livrables rapidement dans des longueurs de 1100 mm, 2200 mm et 2750 mm. Ils sont munis d'un film protecteur et sont livrés par lots, accompagnés de toutes les pièces de montage et de fixation. Selon l'épaisseur d'un vantail, les profils sont disponibles dans différentes largeurs.

En cas d'humidité, le ciment et ses dérivés produisent des substances alcalines susceptibles d'engendrer de la corrosion si on les laisse agir à la surface de l'alliage d'aluminium. C'est la raison pour laquelle il est recommandé de toujours veiller à ce que les profils soient exempts de ciment, d'adhésif et de matériau de joint. Le maître d'ouvrage peut empêcher la corrosion par l'application recommandée sur le profil d'une couche de fond et d'une couche de peinture dans la couleur des murs.
